Tnmd Cas9-CKO Strategy

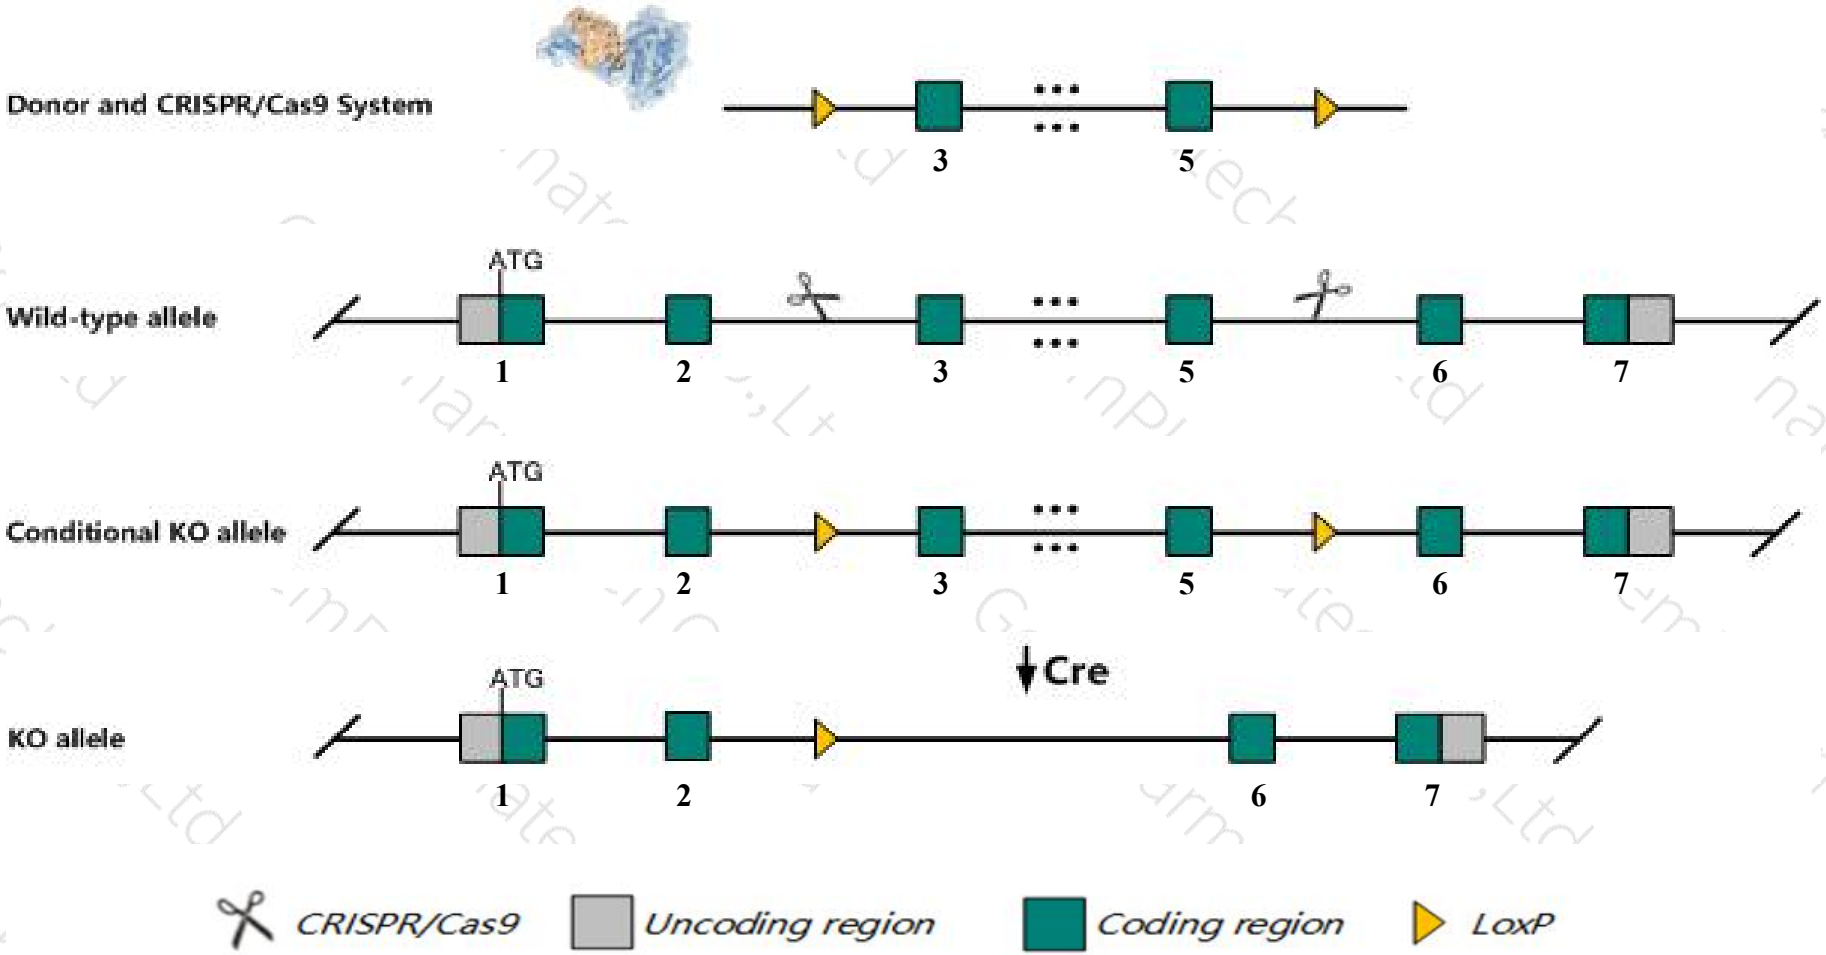
Designer: Xueting Zhang
Reviewer: Yanhua Shen
Design Date: 2019-12-30

Project Overview

Project Name	***Tnmd***
Project type	**Cas9-CKO**
Strain background	**C57BL/6JGpt**

Conditional Knockout strategy

This model will use CRISPR/Cas9 technology to edit the *Tnmd* gene. The schematic diagram is as follows:



Technical routes

- The *Tnmd* gene has 1 transcript. According to the structure of *Tnmd* gene, exon3-exon5 of *Tnmd-201* (ENSMUST00000033602.8) transcript is recommended as the knockout region.The region contains 397bp coding sequence. Knock out the region will result in disruption of protein function.

- In this project we use CRISPR/Cas9 technology to modify *Tnmd* gene. The brief process is as follows:CRISPR/Cas9 system and Donor were microinjected into the fertilized eggs of C57BL/6JGpt mice.Fertilized eggs were transplanted to obtain positive F0 mice which were confirmed by PCR and sequencing. A stable F1 generation mouse model was obtained by mating positive F0 generation mice with C57BL/6JGpt mice.

- The flox mice will be knocked out after mating with mice expressing Cre recombinase, resulting in the loss of function of the target gene in specific tissues and cell types.

Notice

- According to the existing MGI data,Homozygous females exhibit a decrease in tenocyte proliferation and tendons have a greater variation of collagen fibril calibers exhibiting increased maximal diameters.

- The *Tnmd* gene is located on the ChrX. If the knockout mice are crossed with other mice strains to obtain double gene positive homozygous mouse offspring, please avoid the two genes on the same chromosome.

- This Strategy is designed based on genetic information in existing databases.Due to the complexity of biological processes, all risk of loxp insertion on gene transcription, RNA splicing and protein translation cannot be predicted at existing technological level.

Gene information （NCBI）

Tnmd tenomodulin [*Mus musculus* (house mouse)]

Gene ID: 64103, updated on 17-Dec-2019

Summary

Official Symbol	Tnmd provided by MGI
Official Full Name	tenomodulin provided by MGI
Primary source	MGI:MGI:1929885
See related	Ensembl:ENSMUSG00000031250
Gene type	protein coding
RefSeq status	VALIDATED
Organism	Mus musculus
Lineage	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Myomorpha; Muroidea; Muridae; Murinae; Mus; Mus
Also known as	TeM; ChM1L; Bricd4; 1110017I01Rik
Expression	Biased expression in limb E14.5 (RPKM 26.1) and CNS E14 (RPKM 2.6) See more
Orthologs	human all

Genomic context

Location: X; X E3

See Tnmd in Genome Data Viewer

Exon count: 8

Annotation release	Status	Assembly	Chr	Location
108	current	GRCm38.p6 (GCF_000001635.26)	X	NC_000086.7 (133851008..133865577)
Build 37.2	previous assembly	MGSCv37 (GCF_000001635.18)	X	NC_000086.6 (130385547..130400116)

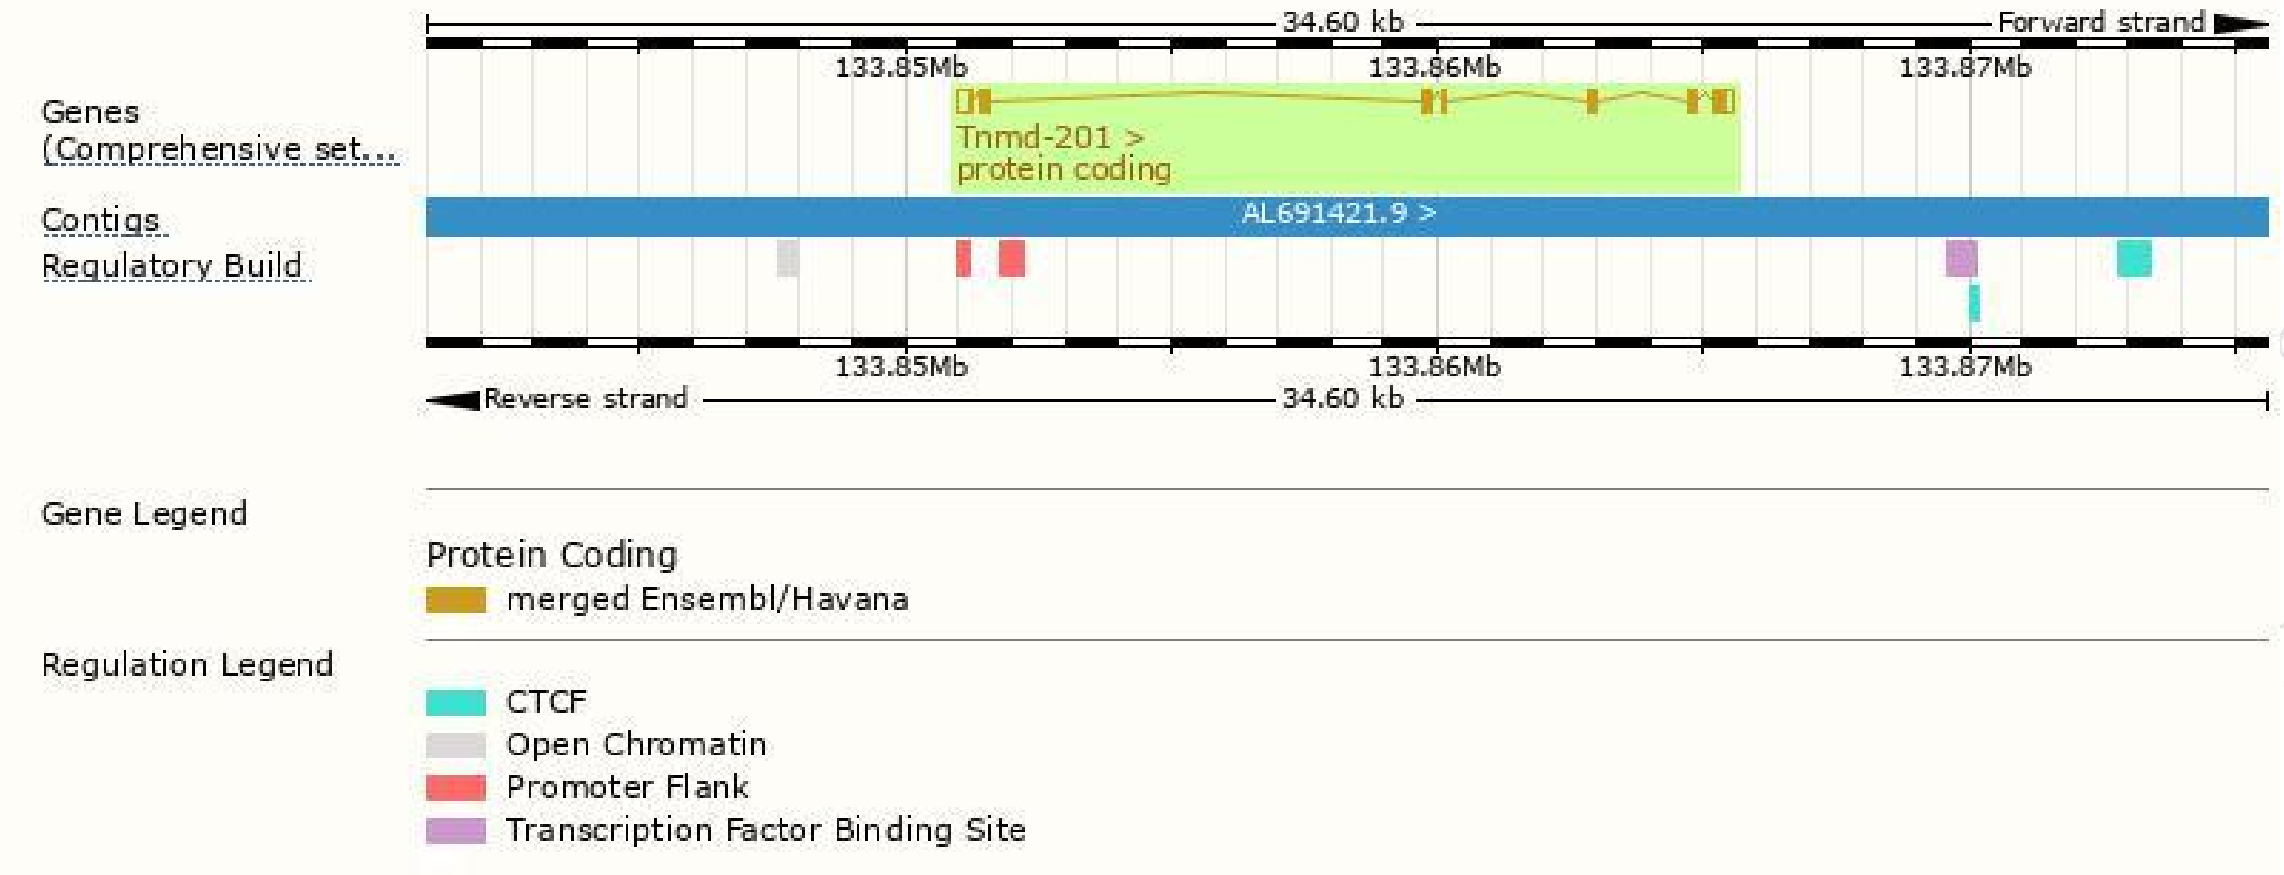
Transcript information（Ensembl）

The gene has 1 transcript,and the transcript is shown below:

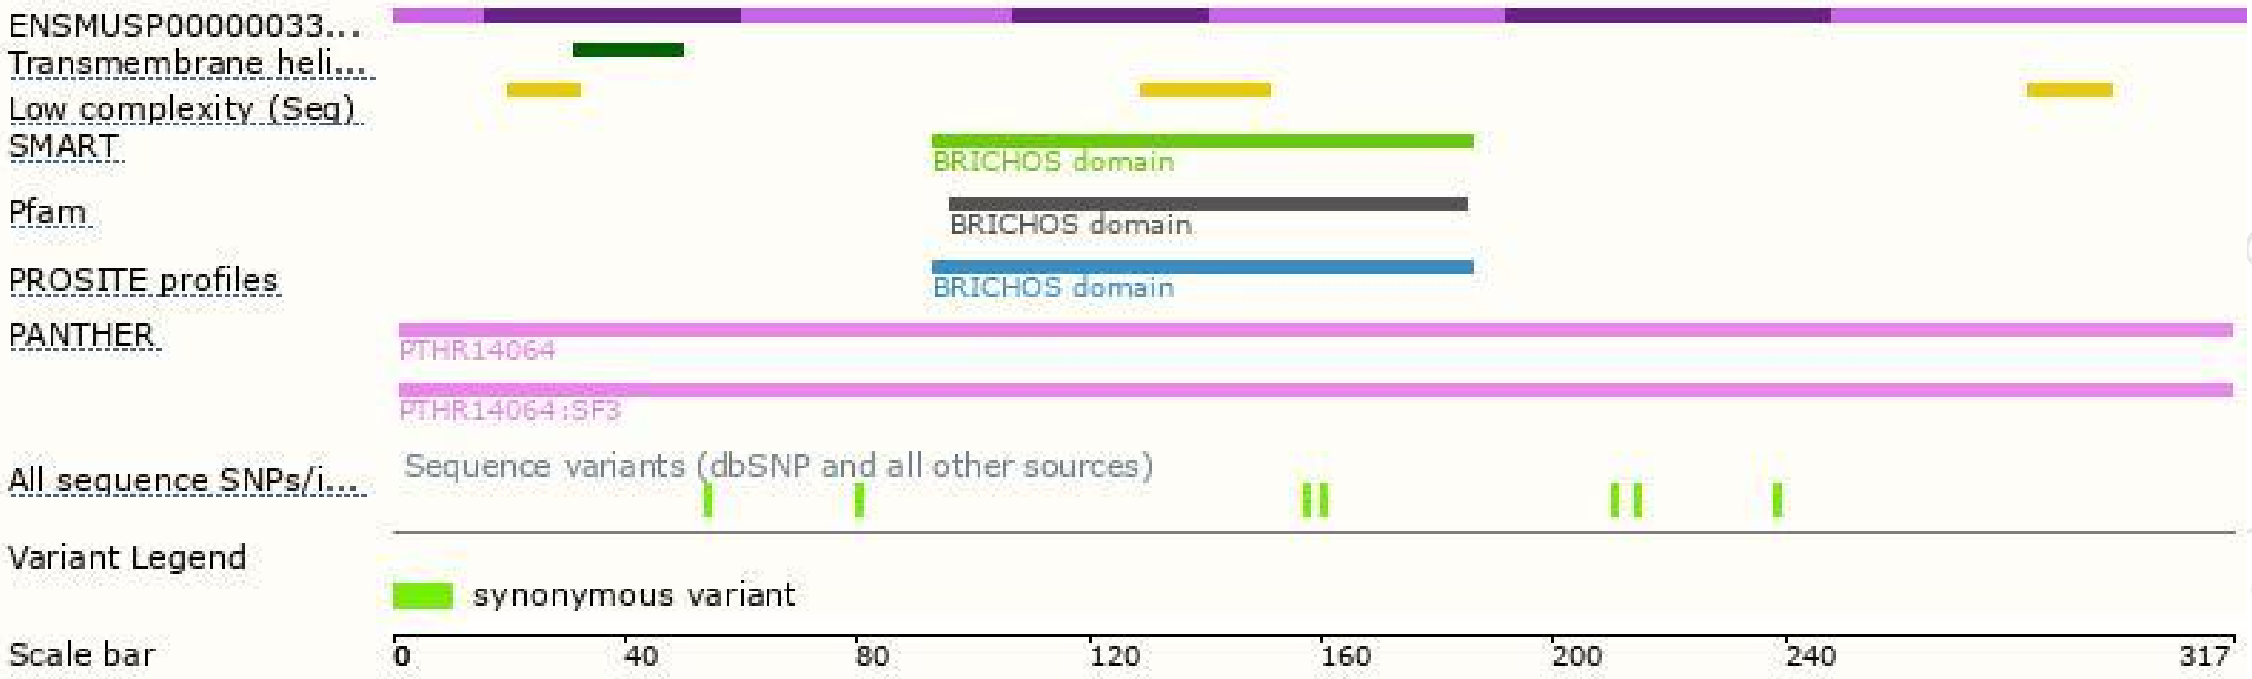
Name	Transcript ID	bp	Protein	Biotype	CCDS	UniProt	Flags
Tnmd-201	ENSMUST00000033602.8	1353	317aa	Protein coding	CCDS30386	Q9EP64	TSL:1 GENCODE basic APPRIS P1

The strategy is based on the design of *Tnmd-201* transcript,The transcription is shown below

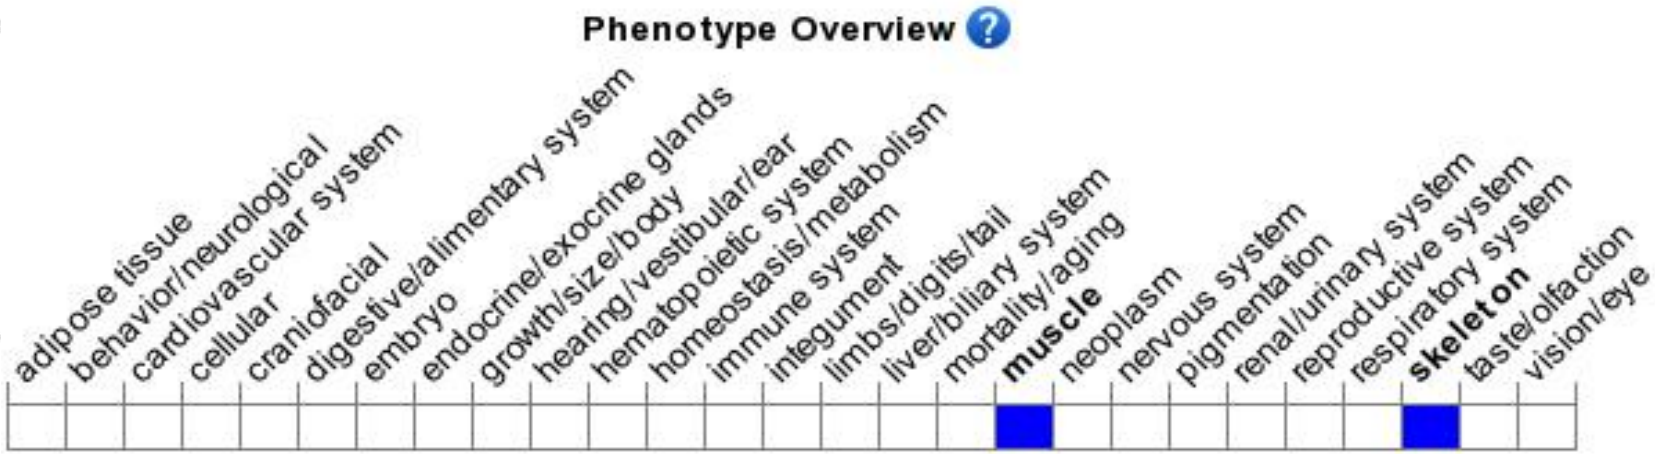
Genomic location distribution



Protein domain



Mouse phenotype description(MGI)



Phenotypes affected by the gene are marked in blue.Data quoted from MGI database(http://www.informatics.jax.org/).

According to the existing MGI data,Homozygous females exhibit a decrease in tenocyte proliferation and tendons have a greater variation of collagen fibril calibers exhibiting increased maximal diameters.
